

TEAM INFINITY (e i g h t)

CSPB Review Platform

Sprint 1 End-of-Sprint Review

Adam Chanthakeo · Hannah Pfeifer · Craig Sanders · Sean Lin

Today's Agenda

01

Project Overview

What we're building and why

02

Sprint 1 Deliverables

Proposal, team setup, and instructor feedback

03

User Roles & Stories

What students and admins can do

04

Core Features Decided

Account model, review system, and tech stack

05

Wireframe

Layout Ideas

06

Open Questions

Decisions still to be made

Project Overview

Vision

A peer-review website where CSPB students browse and submit course reviews — helping classmates make informed registration decisions.

Browse & Search

Anyone can read reviews. Filter by course number, name, or professor.

Write Reviews

Logged-in students submit one review per course via a structured form.

Moderation

Admin accounts add/remove courses and delete spam reviews.

Sprint 1 Deliverables

Completed

- Project proposal submitted
- Team formed & weekly meeting set (Thursdays 9am MT)
- Trello product backlog created
- GitHub repository established
- Vision statement & MVP scope defined
- Risk identification & mitigation strategy documented

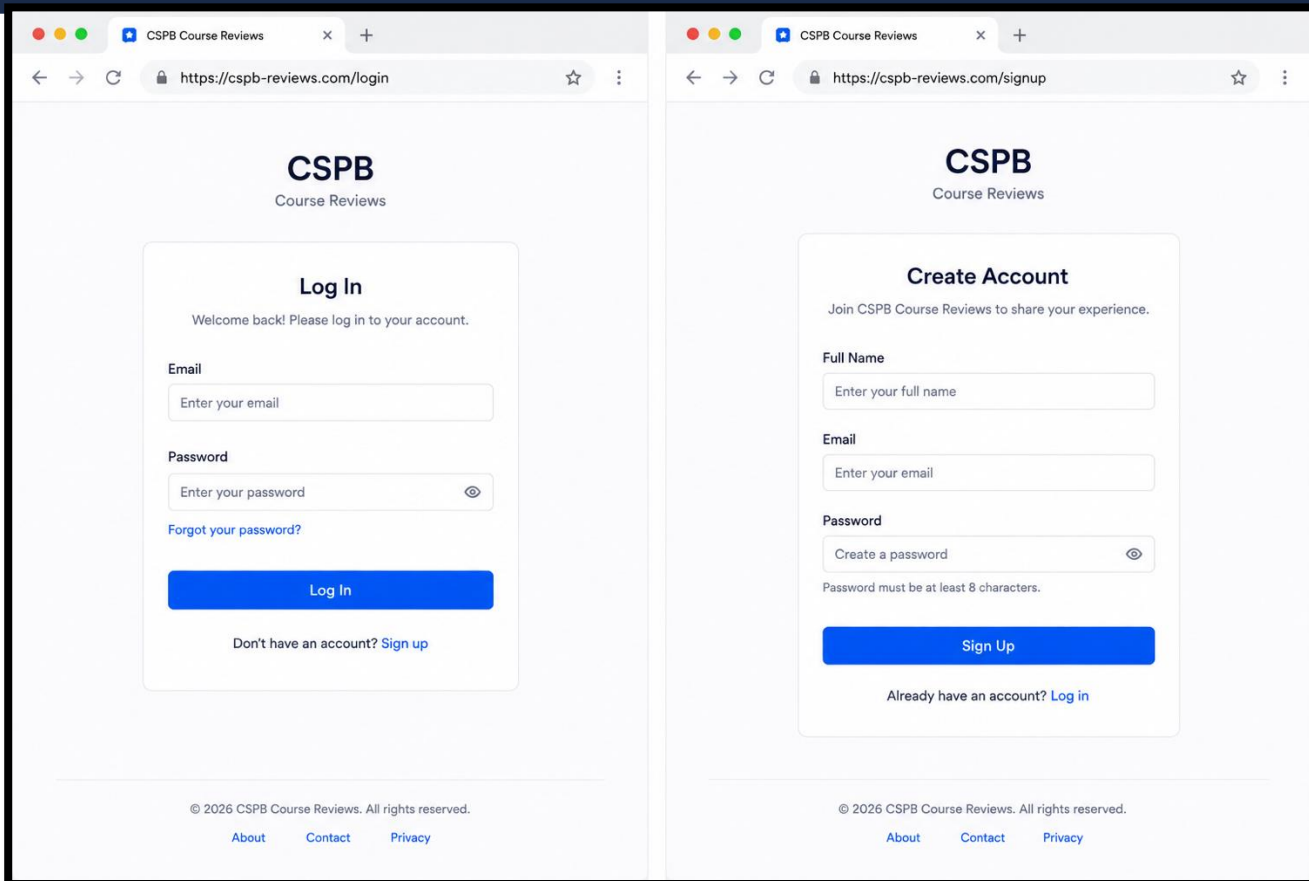

Instructor Feedback

Sharpen user stories — what exactly can each role do?

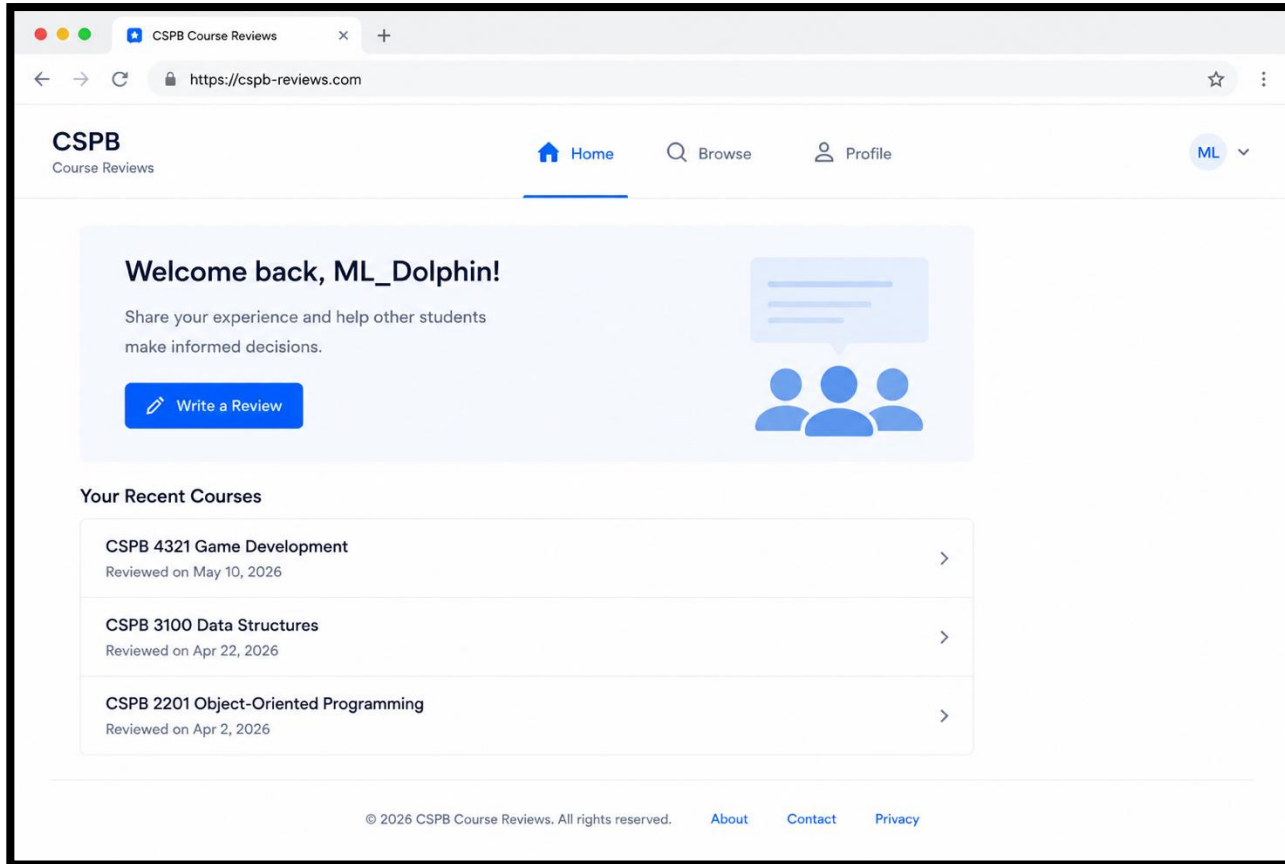

Align on a concrete technology stack

Clarify the account/anonymity model

CSPB 4321 Game Development - 4 credits

1

When did you take this course?

Year:

Semester:

2

What is your overall rating for this course?

3

How difficult was the course? (1 = very easy, 5 = very hard)

4

How many hours per week did you spend on this course?

hours per week

5

Tell us what you think about this course (optional)

Write your comments here...

User Roles & Stories

Guest

(No login required)

- Browse all course listings
- Read any course review
- Search courses by number, name, or professor
- Sort courses by rating

Student

(Logged-in account)

- All guest abilities
- Submit one review per course
- Edit own review (marked as edited)
- Thumbs-up / thumbs-down on reviews
- Choose a pseudonym/username

Admin

(Moderation & management)

- Add new courses to the platform
- Edit course details
- Delete spam or rule-violating reviews
- View registered user accounts

Core Features Decided

Account Model

- Username + password signup (no email required initially)
- Pseudonym visible on reviews — real name never shown
- Unique username enforced at account creation
- Each account & review gets a unique backend ID

Review System

- One review per student per course
- Editable after submission — labeled (edited)
- Thumbs up / thumbs down per review
- Courses sortable by average rating

Technology Stack

- Frontend: HTML, CSS, minimal JavaScript
- Backend: Python + Flask
- Templates: Flask/Jinja2
- Database: SQLite → SQLAlchemy ORM
- Auth: Flask-Login / session handling

Open Questions

Decisions to resolve in Sprint 2:

Comment threading?

Should users comment on reviews? Team leans yes, but only one level deep (no comment-on-comment) to keep MVP manageable.

Password reset?

Users forget passwords. If no email integration, what is the fallback? Admin reset? Security question? TBD.

Review anonymity from admin?

Admins will need to moderate. Can they see reviewer identity, or is it hidden from everyone including admins?

DB hosting?

SQLite works for development. What is the plan for deployment? Shared host, university server, or cloud?

Sprint Retrospective

What went well?

What didn't work?

How can the team improve?

Possible Sprint 2:

Sprint Goal: Finalize user stories, set up the project scaffold, and implement user account creation and login.

Planning

- Finalize and write formal user stories for all roles
- Resolve open questions (comments, password reset, anonymity)
- Confirm DB hosting approach

Development

- Initialize Flask project structure
- Create SQLite schema: users, courses, reviews
- Build account registration and login pages
- Implement session management with Flask-Login

Design

- Wireframe main pages: home, course list, course detail, review form
- Placeholder space reserved for screenshots in next review
